Life Style App

Requirements Document - Functional & Non-Functional (MVP scope)

This document lists the functional and non-functional requirements for the Life Style app MVP, based on all decisions made so far (module scope, data model, and architecture).

1. Functional Requirements

1.1 Authentication & Privacy

ID	Requirement	Priority
FR-1	User can sign up and log in using Django auth (email + password) via DRF SimpleJWT (access + refresh tokens).	Must
FR-2	User can enable an App Lock; unlocking is verified against the backend (not a local-only check).	Must
FR-3	User can toggle a "privacy mode" to hide/blur monetary amounts on screen.	Should

1.2 Tasks & Projects

ID	Requirement	Priority
FR-4	User can create, edit, complete, and delete tasks with title, description, due date, priority, and status.	Must
FR-5	User can group tasks under projects.	Must
FR-6	User can set a task as recurring on a schedule (distinct from Habits).	Must
FR-7	User can enable an optional Start/Stop timer per task; each session (start/stop) is logged.	Must
FR-8	User can view total time spent and session history per task.	Should

1.3 Habits & Goals

ID	Requirement	Priority
FR-9	User can create daily/recurring habits and mark them done for the day.	Must
FR-10	User can see a streak counter (consecutive days completed) per habit.	Should
FR-11	User can create long-term goals and break them into milestones/sub-tasks.	Should

1.4 Notes

ID	Requirement	Priority
FR-12	User can create quick notes and tag them.	Must
FR-13	User can link a note to a task or project.	Must
FR-14	Data model reserves a relation for attaching files to notes/projects (feature itself deferred).	Later

1.5 Money

ID	Requirement	Priority
FR-15	User can manually log an expense with amount, category, and date.	Must
FR-16	User can add subscriptions with a renewal date and get a reminder before renewal.	Must
FR-17	User can set a monthly budget per category and see progress toward it.	Should
FR-18	User can view a basic weekly/monthly spending report.	Should
FR-19	Automatic SMS/email-based expense detection.	Later

1.6 Calendar & Reminders

ID	Requirement	Priority
FR-20	User can create standalone calendar events (with or without linking to a task/habit).	Must
FR-21	Every event automatically gets a default reminder 15 minutes before it starts; user can edit or add more.	Must
FR-22	Reminders are delivered via the backend (server-side scheduling), so they fire even if the app is closed.	Must
FR-23	Reminder system supports tasks, habits, subscriptions, and events through one shared table.	Must

1.7 Home Dashboard

ID	Requirement	Priority
FR-24	Home screen shows today's focus tasks, overdue items, habit progress, and a spending snapshot.	Must

1.8 Search

ID	Requirement	Priority
FR-25	A single search returns results from Tasks, Notes, Money, and Events together in one screen, grouped by section.	Must

1.9 Export

ID	Requirement	Priority
FR-26	User can export a PDF report (e.g. money/report summary).	Should
FR-27	User automatically receives a daily "end of day" summary (tasks done, habits kept, amount spent) via the reminder/notification system.	Should

2. Non-Functional Requirements

ID	Requirement	Priority
NFR-1	Backend built with Django + Django REST Framework, serving a Flutter mobile app.	Must
NFR-2	Scheduled/background jobs (reminders, daily summary) run via Celery + Celery Beat or equivalent.	Must
NFR-3	Push notifications delivered via FCM (Firebase Cloud Messaging) or equivalent, triggered server-side.	Must
NFR-4	Polymorphic references (Reminders.entity_id, Events.linked_id) are validated in application code, since the database cannot enforce t	Must
NFR-5	Creating an Event and its default Reminder happens in a single atomic transaction.	Must

NFR-6	The app should feel calm and pressure-free by default — no aggressive gamification or guilt-based nudges.	Should
NFR-7	Sensitive data (money, notes) protected behind backend-verified App Lock.	Must

Priority key: Must = required for MVP (Phase 1). Should = valuable, can slip to right after MVP if needed. Later = explicitly deferred to Phase 2/3 (Files, SMS/email auto-tracking).

Next Step

With functional and non-functional requirements listed, the next step is the full ERD covering all tables (Users, Tasks, Projects, Habits, Goals, Notes, Money/Subscriptions, Reminders, Events) and their relationships.
